March 12, 2019

I have read with great interest your ad for a Principal Geotechnical Engineer. I am confident that my strong educational background (M.Sc. in Geotechnical Option of Geological Engineering), my Professional Engineer status in Ontario and my 33+ years of geotechnical engineering experience related to the design and construction projects spanning several industries will help me become successful in the subject role and a value adding member of your team.

My experience has developed progressively from field investigations, through construction QA/QC, to engineering studies and analyses, and management of multi-disciplinary projects. More specifically, my 7 years of site selection studies / investigations experience and practice of engineering geology / rock engineering related to large underground and surface excavations for hydropower projects and 4 years of urban-municipal and heavy construction geo-environmental engineering practice, was followed by 20 years of focus on the application of geotechnical engineering expertise to site selection / investigation, design, construction and operation of numerous mining projects across Canada and worldwide. During this latter stage, I also led the geotechnical function as it relates to business development and technical expertise.

In my latest role as a Manager of Repository Engineering for the APM DGR project, my geotechnical expertise gained on hydropower, heavy construction, and mining projects has expanded through its application to nuclear waste management.

I participated in numerous presentations to diverse audiences, wrote a large body of technical reports and several technical papers, completed several due diligence / third-party technical reviews, and have NI 43-101 Quality Person (QP) designation. I have built relationships across many geographic regions based on transparency and trust and am influential through my passion and performance.

I will be glad to meet and discuss my experience as it relates to this role.

Sincerely,

Aleksandar (Sasha) Živković, M.Sc., P.Eng.
