Re: **Environmental Engineer or Scientist** (Intermediate Associate)

Ms d'Obrenan,

I am writing to express interest in your search for an Environmental Engineer or Scientist posted on the 30 Forensic Engineering website.

I am a new graduate in Earth Sciences - Chemical and Environmental Toxicology and an Environmental Engineer with independent engineering judgement demonstrated in the nuclear industry and environmental consulting.

I have experience with hazard assessments, facility inspections, personal protective equipment and regulatory compliance, including active decommissioning projects. I was an analyst and section head in safety engineering in support of reactor and waste management facilities and applied engineering principles to obtain Ontario P.Eng. certification. I have worked in reactor and earth sciences chemistry laboratories. I have been a tutor in statistics and science and have modelling experience in chemical partitioning, redox reactions, dispersion and shielding.

I aim to develop further professional expertise and qualifications. I look forward to discussing how I could grow with and realize with you the 30 Forensic Engineering strategic plan.

Sincerely,

Kevin Britton
