

Uncompromising investigative forensic reporting.

[READ MORE](#)

When you know the facts, you speak with confidence.

With more than 60 engineers, scientists and experts working in nine different practice areas, we've built a reputation for [our thorough approach](#) to investigative forensic reporting. We're truth-seekers with a unique ability to report highly complex information in ways that everyone can understand, layperson and industry expert alike.

A diverse group of individuals, we share a lifelong fascination for how things work. We love the mystery. The theory. The mechanics. The science. The rigour. We're tinkerers at heart. Detectives. Problem-solvers. But perhaps most of all, we're reporters. We leave no questions unanswered, no ethics forgotten, and no fact unchecked – enabling you to make decisions with confidence.

Diverse disciplines. Diverse expertise.

Biomechanics & Personal Injury
Civil/Structural Failure
Collision Reconstruction
Construction Claims
Electrical Engineering
Environment, Health & Safety
Fire & Explosion
Geotechnical Engineering
Multi-Disciplinary Remediation
Piping & HVAC
Product Failure
